DETAILED ACTION

Examiner acknowledges a submission of the amendment and arguments filed on February 26, 2009. Claims 2 and 5 are deleted. Claims 1, 3 and 4 are amended. Amendment and arguments have overcome rejections under 102 (b) and 103(a).

REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance.

An amended independent Claim 1 discloses a device for the dissipation of electricity from an object, the device comprising at least one highly conductive contacting means intended to be applied in contact with the object and to be connected to a dissipation point capable of dissipating electric current, and a low conductive material for slow dissipation of current from the object, wherein during use, for safe dissipation of static electricity from the object, the contacting means is connected to the dissipation point via the low conductive material, such that when said contacting means is applied into contact with the object the current is first dissipated from the object over to the highly conductive contacting means, then through the low conductive material, and finally to the dissipation point, wherein the formation of sparks is avoided, wherein the device is formed as a clamp having two opposite conductive contacting means which are biased against each other by means of a spring, two mutually hinged arms connected to respective contacting means, and a dissipation cable intended to be connected to said dissipation point, wherein the low conductive material is included in at least one of the arms, such that at least one of the contacting means is connected to the dissipation

Art Unit: 2836

cable via the low conductive material; wherein at least one of the arms is provided with an interior part of an insulating material and an exterior cover of the low conductive material.

The closest reference for the claim is Poli et al. (US 5,280,979). Regarding Claim 1, Poli et al. discloses following: a device for the dissipation of electricity from an object, the device comprising at least one equivalent highly conductive contacting means, i.e. pick-up tip part including cylindrical body (1 in Fig. 1 and 2A, col. 2, lines 13 – 17) intended to be applied in contact with the object and to be connected to a dissipation point capable of dissipating electric current, as shown in Fig. 3, and a low conductive material, i.e. resistor (4 in Fig. 2A, col. 2, lines 45 - 65) for slow dissipation of current from the, wherein during use, for safe dissipation of static electricity from the object, the contacting equivalent means is connected to the dissipation point via the low conductive material (resistor), such that when the contacting means is applied into contact with the object the current is first dissipated from the object over to the highly conductive equivalent contacting means, then through the low conductive material, and finally to the dissipation point, wherein the formation of sparks is avoided (col. 1, line 19 – 33).

The other closest references are Siegel (US 5,246,157) and Han et al. (US 5,708,552). Siegel discloses the device being formed as a clamp (Fig. 1) having two opposite conductive contacting means (21 in Fig. 1, col. 11, line 1), which are biased against each other by means of a spring (9 in Fig. 1), two mutually hinged arms connected to respective contacting means (21 in Fig. 1). Siegel further discloses

Art Unit: 2836

connecting cable. However, the cable is used for delivery of power to the soldering tools rather than for dissipation of the electrostatic charge. Han et al. disclose the ESD protection system using the grounding cable (11 in Fig. 1) for physical grounding the electrostatic discharge from electronic parts.

However, none of the references disclose or suggests the clamping device with at least one of the arms being provided with an interior part of an insulating material and an exterior cover of the low conductive material.

Allowability resides, at least in part, in the above-described limitations, which has not been disclosed in the Prior Art in a search.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
